

1. (Second Amended) A cleaning device comprising:

a mount;

a squeegee that is made of an elastic material and that is retained in the mount;

5 a stemlike handle that is joined to the mount pivotably about a pivot axis that extends perpendicular to a longitudinal direction of the squeegee;

B¹ wherein the pivot axis of the mount and the handle forms an acute angle of approximately 30 to 60° with a longitudinal direction of the handle,

10 wherein a geometric line of intersection of a common pivoting plane of the mount and the handle with a surface to be cleaned is located below the squeegee with respect to a downward pulling direction of the cleaning device, and

15 wherein the mount and the handle are adjustably connected by a screw connection to achieve desired clamping.
